Hypomelanotic melanoma mimicking pigmented Bowen disease.

Braga JC, Paschoal FM, Blumetti TC, Bussade M, Duprat J, Landman G, Rezze GG. *J Am Acad Dermatol.* 2016 Jan;74(1):e11-3. doi: 10.1016/j.jaad.2015.09.052.

ABSTRACT

A 50-year-old woman with multiple nevi noticed the enlargement of a lesion on her right calf over the past 2 years. Clinically, the lesion was a light-brown 8-mm scaly papule (Fig 1, A). KEYWORDS: Bowen disease; dermoscopy; hypomelanotic melanoma; reflectance confocal microscopy PMID:26702807
